

Object Management Workbench (OMW) – PART I

By Jean Driscoll, Holiday Retirement Corp.

Editor's Note: Jean Driscoll has been supporting IBM midrange systems (S/36, S38, AS/400) for over 15 years and has supported JD Edwards® software more than 10 years as a client. Having held positions in midrange operations, development, applications support, training, security administration, and system programming, she is now working as a CNC administrator.

We're thrilled that Jean has documented the OneWorld OMW so thoroughly. It is important that you realize this document is aimed at her SuperUsers, so that they can manage the process of changing User Defined Codes and adding new versions of standard reports. For a write-up on why Jean feels it is very appropriate to give access to the OMW to her SuperUsers, please see the September 2002 issue of the JDETips Newsletter.

Anyone new to OneWorld® CNC will find this a very useful document. Any application consultant or SuperUser will also benefit from learning how "Projects" are managed within OneWorld.

Object Management Workbench (OMW) – PART I

Table of Contents

	Page
I. Accessing Object Management Workbench - OMW	3
II. OMW and Your Default Project Objects Owners	3
III. Project Life Cycle – Status Codes	6
